

COURSE SLIDES

# Adobe Illustrator Fundamentals for Beginners

---

Course code C037

Duration 1 day · 7.5 instructional hours

Provider Tertiary Infotech Academy Pte Ltd · UEN:  
201200696W

Version v1 · 4 October 2026

# Trainer Profile Template

## Name

Trainer:

\_\_\_\_\_

## Industry practice

Relevant vector-graphics, design-production or creative-technology experience.

## Adult learning

Approved adult-training credentials for this delivery context.

## Facilitation

Concept explanation, demonstration, coached practice and evidence review.

## Quality focus

Editable artwork, visible rationale, verified output and responsible asset use.

## Contact route

Use the provider-approved learner support channel.

# Dr Alfred Ang

## Role

Principal Trainer · Tertiary Infotech Academy Pte Ltd

## Expertise

Digital transformation, creative technology, courseware development and adult learning.

## Facilitation

Concept-first explanation followed by coached practice and evidence review.

## Quality focus

Source alignment, reproducible workflows and clear acceptance criteria.

## Learning culture

Ask early and explain the reason behind each design choice.

## Contact

enquiry@tertiaryinfotech.com · +65 6100 0613

# Your Vector-Graphics Context

## Role

What graphics do you create or manage?

## Channel

Screen, social, presentation, packaging or print?

## Friction

Which Illustrator task currently costs the most time?

## Quality

Which defect is most visible in current output?

## Experience

Which vector tool family is already familiar?

## Evidence

What finished artifact will prove improvement?

# Working Agreements

## Participate

Try the tools and explain choices.

## Respect

Critique the work, not the person.

## Protect assets

Use permitted sources and retain rights evidence.

## Save versions

Preserve originals and name layers, artboards and files.

## Share safely

Protect learner work and course materials.

## Verify

Reopen exports before delivery.

# Download Course Materials

## OUTCOME

**Portal: <https://lms-tms.tertiaryinfotech.com/> · Confirm the deck, Learner Guide, Lesson Plan and ten Illustrator/vector lab folders before starting.**

# One-Day Learning Journey

**OUTCOME**

**The morning builds core vector control; the afternoon improves, evaluates and delivers a coherent multi-output system.**

# Course Outline

## Topic 1

Basic Digital Graphics Design with Illustrator  
Vector foundations · workspace · selection · shapes · colour · strokes · layers · transforms  
LO1

## Topic 2

Improve Digital Graphics Design with Illustrator  
Construction · guides · pen control · gradients · patterns · symbols · appearance · type  
LO2

## Topic 3

Evaluate Graphics Design with Illustrator  
Placed imagery · Image Trace · artboards · evaluation · export · package · IP · peer review  
LO3

# Tools, Materials and Workspace

## Hardware

Laptop, suitable display, mouse or tablet and reliable storage.

## Software

A current supported Adobe Illustrator desktop release.

## Workspace

Properties, Layers, Artboards, Appearance and relevant task panels.

## Sources

Rights-cleared AI, SVG, PDF and raster reference assets.

## Output brief

Dimensions, colour mode, transparency, bleed and format.

## Safety

Versioned masters, editable construction and verified exports.

# Illustrator Scope and Disclaimer

## Industry use

Vector marks, icons, diagrams, packaging, type and multi-artboard systems.

## Not Adobe certification

This course does not certify an Adobe credential.

## Interface drift

Labels may move between releases; vector principles remain stable.

## Decision over clicks

Choose by geometry, editability, scale and output.

## Responsible AI

Review generated content and retain provenance where relevant.

## Trademark

Adobe and Illustrator are Adobe trademarks; the provider is not affiliated with Adobe.

01

# Basic Digital Graphics Design with Illustrator

Vector foundations · workspace · selection · shapes · colour · strokes · layers · transforms

LO1

# Scale Robustness: Vector vs Raster

READ THE CHART

**Illustrative index: vector geometry is recalculated at output size, while a fixed raster source reveals pixels as enlargement increases.**

Editable native PowerPoint chart

# Vector, Raster and Resolution

1

## How it works

Vector paths are mathematically described; raster images are pixel grids whose detail depends on dimensions.

2

## Best used for

Logos, icons, diagrams and artwork that must scale cleanly.

3

## Professional decision

Choose this method when its content model and edge behaviour fit the brief.

4

## Quality signal

The vector artwork remains crisp at multiple sizes and placed raster assets meet output resolution.

## Vector, Raster and Resolution · control and judgement

### CONTROL MAP

**Anchor geometry; stroke; fill; raster dimensions; linked or embedded status.**

### WATCH FOR

**Assuming every placed image becomes resolution-independent.**

### QUALITY PROOF

**The vector artwork remains crisp at multiple sizes and placed raster assets meet output resolution.**

**Decision rule · preserve a baseline, isolate the intended change, then inspect at the delivery size.**

# Illustrator Workspace

1

## How it works

Panels expose context-sensitive controls while workspaces save a task-oriented arrangement.

2

## Best used for

Reducing search time and keeping object, colour, layer and artboard decisions visible.

3

## Professional decision

Choose this method when its content model and edge behaviour fit the brief.

4

## Quality signal

A reviewer can identify the active object, layer, artboard and relevant controls.

# Illustrator Workspace · control and judgement

## CONTROL MAP

**Toolbar; Properties; Control;  
Layers; Artboards; panel  
docking; workspace reset.**

## WATCH FOR

**Editing the wrong object  
because selection, layer or  
isolation state is unclear.**

## QUALITY PROOF

**A reviewer can identify the  
active object, layer, artboard  
and relevant controls.**

**Decision rule · preserve a baseline, isolate the intended change, then inspect at the delivery size.**

# Artboards as Deliverable Frames

1

## How it works

Multiple artboards organise related outputs in one document without changing the artwork itself.

2

## Best used for

Brand systems, social sizes, icon families, print variants and review boards.

3

## Professional decision

Choose this method when its content model and edge behaviour fit the brief.

4

## Quality signal

Each artboard has a meaningful name, correct dimensions and verified export.

## Artboards as Deliverable Frames · control and judgement

### CONTROL MAP

**Size; orientation; name;  
order; reference point;  
Move/Copy Artwork with  
Artboard.**

### WATCH FOR

**Unclear names, accidental  
overlaps and exporting the  
wrong range.**

### QUALITY PROOF

**Each artboard has a  
meaningful name, correct  
dimensions and verified  
export.**

**Decision rule · preserve a baseline, isolate the intended change, then inspect at the delivery size.**

# Selection and Isolation

1

## How it works

Selection targets whole objects or groups; Direct Selection targets anchors and segments; Isolation limits editing scope.

2

## Best used for

Editing complex grouped artwork without disturbing unrelated objects.

3

## Professional decision

Choose this method when its content model and edge behaviour fit the brief.

4

## Quality signal

Only the intended object or anchors change and the hierarchy remains intact.

# Selection and Isolation · control and judgement

## CONTROL MAP

**Selection; Direct Selection;  
Group Selection; Lasso;  
Magic Wand; isolation  
breadcrumb.**

## WATCH FOR

**Moving a group when only  
an anchor should change, or  
editing a hidden/locked item.**

## QUALITY PROOF

**Only the intended object or  
anchors change and the  
hierarchy remains intact.**

**Decision rule · preserve a baseline, isolate the intended change, then inspect at the delivery size.**

# Anchors, Paths and Live Shapes

1

## How it works

Straight and curved segments connect anchor points; live shapes retain editable geometric properties.

2

## Best used for

Accurate icons, diagrams, badges and repeatable geometric construction.

3

## Professional decision

Choose this method when its content model and edge behaviour fit the brief.

4

## Quality signal

The path uses the fewest practical anchors and remains easy to revise.

## Anchors, Paths and Live Shapes · control and judgement

### CONTROL MAP

**Corner/smooth point;  
handles; segment; radius;  
sides; transform values.**

### WATCH FOR

**Too many anchors, uneven  
curves and expanding live  
shapes too early.**

### QUALITY PROOF

**The path uses the fewest  
practical anchors and  
remains easy to revise.**

**Decision rule · preserve a baseline, isolate the intended change, then inspect at the delivery size.**

# Colour Models and Swatches

1

## How it works

RGB describes additive light, CMYK describes subtractive process inks and HSB describes perceptual colour attributes.

2

## Best used for

Screen, print and controlled brand-colour workflows.

3

## Professional decision

Choose this method when its content model and edge behaviour fit the brief.

4

## Quality signal

The document mode and swatches match the delivery brief and repeated colours update consistently.

# Colour Models and Swatches · control and judgement

## CONTROL MAP

**Document colour mode;  
fill/stroke; Swatches;  
global/spot colour; tint;  
Color Guide.**

## WATCH FOR

**Converting late, confusing  
screen colour with print  
output or using unnamed ad-  
hoc colours.**

## QUALITY PROOF

**The document mode and  
swatches match the delivery  
brief and repeated colours  
update consistently.**

**Decision rule · preserve a baseline, isolate the intended change, then inspect at the delivery size.**

# Stroke Anatomy

1

## How it works

A stroke follows a path and can vary in weight, alignment, cap, join, dash, profile and width.

2

## Best used for

Icons, line illustrations, technical diagrams and expressive outlines.

3

## Professional decision

Choose this method when its content model and edge behaviour fit the brief.

4

## Quality signal

Stroke choices remain consistent at the intended display and export sizes.

# Stroke Anatomy · control and judgement

## CONTROL MAP

**Weight; cap; join; miter;  
dash/gap; profile; Width tool;  
Align Stroke.**

## WATCH FOR

**Inconsistent endpoints,  
sharp miter spikes and  
scale-dependent stroke  
surprises.**

## QUALITY PROOF

**Stroke choices remain  
consistent at the intended  
display and export sizes.**

**Decision rule · preserve a baseline, isolate the intended change, then inspect at the delivery size.**

# Layers, Groups and Stacking

1

## How it works

Layers and groups define ownership and navigation; stacking order controls which artwork appears in front.

2

## Best used for

Complex documents that another designer must understand or continue.

3

## Professional decision

Choose this method when its content model and edge behaviour fit the brief.

4

## Quality signal

The Layers panel explains the document and supports quick variant creation.

# Layers, Groups and Stacking · control and judgement

## CONTROL MAP

**Names; groups; sublayers; visibility; lock; target; order; alignment/distribution.**

## WATCH FOR

**Generic names, hidden duplicates and effects applied at the wrong hierarchy level.**

## QUALITY PROOF

**The Layers panel explains the document and supports quick variant creation.**

**Decision rule · preserve a baseline, isolate the intended change, then inspect at the delivery size.**

# Lab 01 · Workspace, Artboards and Selection

Prepare a starter document for a small icon team so another designer can navigate it confidently.

Set up a reliable vector workspace and distinguish object, group and anchor-level selection.

1

Analyse

2

Choose

3

Construct

4

Inspect

5

Evidence

EVIDENCE

Lab01-Workspace-Selection.ai plus an exported evidence board and short comparison of the three selection scopes.

Full procedure · Learner Guide / Lab 01

# Lab 02 · Shapes, Lines and Transform Systems

Create three related wayfinding icons that must remain consistent across print and screen sizes.

Construct a precise icon set from live shapes and numeric transforms.

1

Analyse

2

Choose

3

Construct

4

Inspect

5

Evidence

EVIDENCE

Editable AI master, three icon variants, SVG exports and a one-page PDF comparison.

Full procedure · Learner Guide / Lab 02

# Lab 03 · Colour Systems, Swatches and Strokes

Adapt one campaign mark for RGB social delivery and a CMYK print proof without losing consistency.

Create screen and print colour variants with a controlled stroke language.

## EVIDENCE

Two colour-mode proofs, editable AI files and a decision note covering swatches and stroke behaviour.

Full procedure · Learner Guide / Lab 03

# Lab 04 · Layers, Groups and Alignment

Prepare an inherited artwork file for team handoff and rapid variant production.

Reorganise a complex document so stacking, grouping and alignment are clear and auditable.

1

Analyse

2

Choose

3

Construct

4

Inspect

5

Evidence

EVIDENCE

Structured AI master, two variants and a brief peer-navigation record.

Full procedure · Learner Guide / Lab 04

# Topic 1 Checkpoint

## Purpose

What must the audience notice or understand?

## Method

Why does this vector method fit the brief?

## Control

Which setting most changes the result?

## Failure

What defect would make it unacceptable?

## Proof

Which panel, view and export demonstrate quality?

## Next

What controlled variation would improve it?

02

# Improve Digital Graphics Design with Illustrator

Construction · guides · pen control · gradients · patterns · symbols · appearance · type

LO2

# Editability by Construction Method

## READ THE CHART

**Scale: 1 = low, 5 = high.  
Preserve the most  
editable structure that  
still meets delivery and  
compatibility  
requirements.**

Editable native PowerPoint chart

# Compound Shapes and Pathfinder

1

## How it works

Boolean operations combine, subtract, intersect or divide overlapping geometry.

2

## Best used for

Constructing precise marks and reusable forms from simple shapes.

3

## Professional decision

Choose this method when its content model and edge behaviour fit the brief.

4

## Quality signal

The chosen operation produces clean geometry with intentional overlaps and no stray paths.

## Compound Shapes and Pathfinder · control and judgement

### CONTROL MAP

**Unite; Minus Front; Intersect;  
Exclude; Divide; Trim;  
Merge; Expand.**

### WATCH FOR

**Losing editability by  
expanding before the design  
is agreed.**

### QUALITY PROOF

**The chosen operation  
produces clean geometry  
with intentional overlaps and  
no stray paths.**

**Decision rule · preserve a baseline, isolate the intended change, then inspect at the delivery size.**

# Shape Builder and Live Paint

1

## How it works

Shape Builder merges or removes perceived regions; Live Paint treats intersecting paths as paintable faces and edges.

2

## Best used for

Fast exploration from overlapping sketches and line networks.

3

## Professional decision

Choose this method when its content model and edge behaviour fit the brief.

4

## Quality signal

All intended faces are controlled and the result contains no accidental fragments.

# Shape Builder and Live Paint · control and judgement

## CONTROL MAP

**Selected region;  
merge/delete gesture; gap  
options; Live Paint group;  
face/edge selection.**

## WATCH FOR

**Unintended regions caused  
by open gaps or incomplete  
selection.**

## QUALITY PROOF

**All intended faces are  
controlled and the result  
contains no accidental  
fragments.**

**Decision rule · preserve a baseline, isolate the intended change, then inspect at the delivery size.**

# Clipping and Opacity Masks

1

## How it works

A clipping path defines visible geometry; an opacity mask uses grayscale to control degrees of visibility.

2

## Best used for

Image-in-shape treatments, reveals and soft transparency transitions.

3

## Professional decision

Choose this method when its content model and edge behaviour fit the brief.

4

## Quality signal

Source content remains editable and the edge or transparency transition is clean.

# Clipping and Opacity Masks · control and judgement

## CONTROL MAP

Topmost clipping path;  
clipping group; mask  
thumbnail; invert; clip;  
grayscale value.

## WATCH FOR

Confusing a clipping mask  
with a destructive crop or  
losing track of mask/content  
focus.

## QUALITY PROOF

Source content remains  
editable and the edge or  
transparency transition is  
clean.

**Decision rule · preserve a baseline, isolate the intended change, then inspect at the delivery size.**

# Pen and Curvature Control

1

## How it works

Pen creates anchors and direction handles; Curvature creates and converts smooth or corner points more directly.

2

## Best used for

Logos, custom lettering, accurate silhouettes and editable illustrations.

3

## Professional decision

Choose this method when its content model and edge behaviour fit the brief.

4

## Quality signal

Curves are smooth, economical and easy to reshape.

# Pen and Curvature Control · control and judgement

## CONTROL MAP

**Click/drag; handle direction/length; add/delete/convert anchor; close path; rubber band.**

## WATCH FOR

**Excess anchors, kinked joins and handles that fight the intended curve.**

## QUALITY PROOF

**Curves are smooth, economical and easy to reshape.**

**Decision rule · preserve a baseline, isolate the intended change, then inspect at the delivery size.**

# Pencil and Brush Systems

1

## How it works

Pencil creates freehand paths; brushes apply calligraphic, scatter, art, bristle or pattern behaviour to paths.

2

## Best used for

Expressive lines, illustrated borders, textures and repeated motifs.

3

## Professional decision

Choose this method when its content model and edge behaviour fit the brief.

4

## Quality signal

The path and brush definition remain editable and reproduce the intended character.

# Pencil and Brush Systems · control and judgement

## CONTROL MAP

**Fidelity; smoothness; keep selected; brush scale; colourisation; direction; corners.**

## WATCH FOR

**Noisy paths, unintended brush scaling and expanded artwork that is hard to revise.**

## QUALITY PROOF

**The path and brush definition remain editable and reproduce the intended character.**

**Decision rule · preserve a baseline, isolate the intended change, then inspect at the delivery size.**

# Guides, Grids and Smart Guides

## How it works

Reference systems reveal alignment, spacing and transform relationships without becoming output artwork.

## Best used for

Grids, icon systems, packaging layouts and consistent spacing.

## Professional decision

Choose this method when its content model and edge behaviour fit the brief.

## Quality signal

Key edges, centres and gaps follow a documented spacing system.

## Guides, Grids and Smart Guides · control and judgement

### CONTROL MAP

Ruler units; guide lock; grid interval/subdivision; snap; Smart Guide categories.

### WATCH FOR

Over-snapping, inconsistent units and aligning to an unintended reference.

### QUALITY PROOF

Key edges, centres and gaps follow a documented spacing system.

**Decision rule · preserve a baseline, isolate the intended change, then inspect at the delivery size.**

# Theoretical Contexts: Constructivist and Swiss

## How it works

Constructivist work often uses geometric tension, diagonals, bold contrast and integrated type; Swiss style emphasises grids, asymmetric order, clarity and disciplined typography.

## Best used for

Giving a visual system a defensible historical or theoretical rationale rather than decorating by habit.

## Professional decision

Choose this method when its content model and edge behaviour fit the brief.

## Quality signal

The design rationale identifies the chosen context and points to visible decisions that support it.

## Theoretical Contexts: Constructivist and Swiss · control and judgement

### CONTROL MAP

**Grid; axis; geometry; scale  
contrast; limited palette;  
sans-serif hierarchy;  
negative space.**

### WATCH FOR

**Copying a surface look  
without connecting it to  
purpose, audience or  
communication logic.**

### QUALITY PROOF

**The design rationale  
identifies the chosen context  
and points to visible  
decisions that support it.**

**Decision rule · preserve a baseline, isolate the intended change, then inspect at the delivery size.**

# Gradients

1

## How it works

Linear, radial and freeform gradients interpolate colour and opacity between defined stops or points.

2

## Best used for

Depth, light, atmospheric colour and controlled transitions.

3

## Professional decision

Choose this method when its content model and edge behaviour fit the brief.

4

## Quality signal

The gradient supports hierarchy and form at delivery size without visible banding.

# Gradients · control and judgement

## CONTROL MAP

Type; angle; aspect; stop location; midpoint; opacity; spread; freeform points/lines.

## WATCH FOR

Banding, muddy colour, too many stops and decorative light inconsistent with form.

## QUALITY PROOF

The gradient supports hierarchy and form at delivery size without visible banding.

**Decision rule · preserve a baseline, isolate the intended change, then inspect at the delivery size.**

# Patterns and Symbols

1

## How it works

Patterns tile reusable artwork; symbols create linked instances that support coordinated change.

2

## Best used for

Brand textures, packaging surfaces, maps, icons and repeated components.

3

## Professional decision

Choose this method when its content model and edge behaviour fit the brief.

4

## Quality signal

The repeat is seamless and all instances remain consistent with intentional variations.

# Patterns and Symbols · control and judgement

## CONTROL MAP

Tile type; overlap; spacing;  
transform pattern; symbol  
instance; dynamic override.

## WATCH FOR

Visible seams, accidental  
object transforms and  
breaking instance  
relationships too early.

## QUALITY PROOF

The repeat is seamless and  
all instances remain  
consistent with intentional  
variations.

**Decision rule · preserve a baseline, isolate the intended change, then inspect at the delivery size.**

# Appearance, Transparency and Effects

1

## How it works

Appearance attributes stack fills, strokes, opacity and live effects without changing the underlying path.

2

## Best used for

Editable badges, outlined text, reusable graphic styles and layered visual treatments.

3

## Professional decision

Choose this method when its content model and edge behaviour fit the brief.

4

## Quality signal

The base path remains editable and the Appearance panel fully explains the treatment.

## Appearance, Transparency and Effects · control and judgement

### CONTROL MAP

**Attribute order; target level; opacity; blend mode; effect parameters; Graphic Styles.**

### WATCH FOR

**Applying effects at the wrong object/group/layer level or expanding too early.**

### QUALITY PROOF

**The base path remains editable and the Appearance panel fully explains the treatment.**

**Decision rule · preserve a baseline, isolate the intended change, then inspect at the delivery size.**

# Typography and Type on a Path

**Tononia Tourism**

1

## How it works

Point, area and path type use different containers; hierarchy comes from typeface, size, leading, tracking, alignment and spacing.

2

## Best used for

Logos, posters, labels, information graphics and brand systems.

3

## Professional decision

Choose this method when its content model and edge behaviour fit the brief.

4

## Quality signal

The message reads in the intended order and the master retains live type.

## Typography and Type on a Path · control and judgement

### CONTROL MAP

**Point/area/path type;  
baseline; leading; tracking;  
paragraph alignment;  
overset; outlines copy.**

### WATCH FOR

**Poor readability, missing  
fonts, accidental overset and  
outlining the only editable  
copy.**

### QUALITY PROOF

**The message reads in the  
intended order and the  
master retains live type.**

**Decision rule · preserve a baseline, isolate the intended change, then inspect at the delivery size.**

## Lab 05 · Pathfinder, Shape Builder and Masks

Develop a product badge that combines overlapping geometry, a clipped image treatment and a soft transparency option.

Compare construction methods and select the most editable result for a badge system.

1

Analyse

2

Choose

3

Construct

4

Inspect

5

Evidence

### EVIDENCE

Editable comparison layers, final badge, clipping and opacity-mask variations and method rationale.

Full procedure · Learner Guide / Lab 05

## Lab 06 · Pen, Curvature, Pencil and Brushes

Produce a mascot mark with a precise silhouette and an expressive supporting stroke.

Create controlled and expressive paths while keeping anchor economy and brush behaviour visible.

1

Analyse

2

Choose

3

Construct

4

Inspect

5

Evidence

EVIDENCE

AI master with Pen, Curvature and Pencil alternatives plus exported selected mark.

Full procedure · Learner Guide / Lab 06

# Lab 07 · Gradients, Patterns and Symbols

Create a packaging surface system with a gradient backdrop, seamless motif and reusable icons.

Build reusable colour and repetition systems, then improve one option through controlled experimentation.

1

Analyse

2

Choose

3

Construct

# Topic 2 Checkpoint

## Purpose

What must the audience notice or understand?

## Method

Why does this vector method fit the brief?

## Control

Which setting most changes the result?

## Failure

What defect would make it unacceptable?

## Proof

Which panel, view and export demonstrate quality?

## Next

What controlled variation would improve it?

03

# Evaluate Graphics Design with Illustrator

Placed imagery · Image Trace · artboards · evaluation · export · package · IP · peer review

LO3

# Professional Evaluation Weighting

■ Hierarchy ■ Geometry ■ Consistency  
■ Output ■ Rights

## READ THE CHART

**Attractiveness alone is insufficient. A professional vector asset must communicate clearly, remain technically sound and carry usable rights evidence.**

Editable native PowerPoint chart

# Format Capability Comparison

READ THE CHART

Illustrative relative capability index. Choose the derivative by channel; retain AI as the editable master where appropriate.

Editable native PowerPoint chart

# Linked and Embedded Images

1

## How it works

Placed artwork can remain linked to an external source or be embedded into the Illustrator document.

2

## Best used for

Hybrid layouts that combine vector systems with photographs or external assets.

3

## Professional decision

Choose this method when its content model and edge behaviour fit the brief.

4

## Quality signal

Links are current or intentionally embedded and all sources are documented.

# Linked and Embedded Images · control and judgement

## CONTROL MAP

**Links panel; status; relink; update; embed; unembed; effective ppi.**

## WATCH FOR

**Broken links, outdated sources, oversized embedded files and insufficient effective resolution.**

## QUALITY PROOF

**Links are current or intentionally embedded and all sources are documented.**

**Decision rule · preserve a baseline, isolate the intended change, then inspect at the delivery size.**

# Image Trace

1

## How it works

Image Trace samples raster pixels into vector regions according to preset and advanced controls.

2

## Best used for

Converting simple logos, sketches or high-contrast artwork into editable vector paths.

3

## Professional decision

Choose this method when its content model and edge behaviour fit the brief.

4

## Quality signal

The result balances fidelity, path economy and editability after expansion and cleanup.

# Image Trace · control and judgement

## CONTROL MAP

**Preset; mode; palette;  
threshold/colours; paths;  
corners; noise; ignore  
colour; expand.**

## WATCH FOR

**Tracing photographs into  
excessive paths or mistaking  
a trace for a faithful original  
vector.**

## QUALITY PROOF

**The result balances fidelity,  
path economy and editability  
after expansion and cleanup.**

**Decision rule · preserve a baseline, isolate the intended change, then inspect at the delivery size.**

# Design Principles in Evaluation

## How it works

Visual hierarchy and relationships determine what is noticed, understood and remembered.

## Best used for

Structured critique of logos, posters, icons, packaging and information graphics.

## Professional decision

Choose this method when its content model and edge behaviour fit the brief.

## Quality signal

Comments connect a visible feature to purpose, audience and acceptance criteria.

## Design Principles in Evaluation · control and judgement

### CONTROL MAP

**Balance; contrast; hierarchy;  
alignment; proximity;  
repetition; scale; negative  
space.**

### WATCH FOR

**Personal preference  
presented as evidence and  
evaluation without a defined  
audience or channel.**

### QUALITY PROOF

**Comments connect a visible  
feature to purpose, audience  
and acceptance criteria.**

**Decision rule · preserve a baseline, isolate the intended change, then inspect at the delivery size.**

# Export Formats and Asset Export

1

## How it works

Export creates channel-specific derivatives while the AI file remains the editable master.

2

## Best used for

Screen SVG/PNG/JPEG, print PDF and multi-size asset delivery.

3

## Professional decision

Choose this method when its content model and edge behaviour fit the brief.

4

## Quality signal

Every derivative reopens correctly and matches the named size, colour and transparency requirement.

## Export Formats and Asset Export · control and judgement

### CONTROL MAP

**Artboard range; SVG styling;  
raster resolution;  
transparency; colour space;  
anti-aliasing; suffix/scale.**

### WATCH FOR

**Exporting the wrong  
artboard, losing  
transparency or handing  
over only a flattened file.**

### QUALITY PROOF

**Every derivative reopens  
correctly and matches the  
named size, colour and  
transparency requirement.**

**Decision rule · preserve a baseline, isolate the intended change, then inspect at the delivery size.**

# Package, Preflight and Handoff

1

## How it works

Packaging collects the Illustrator document, linked graphics and permitted fonts with a report.

2

## Best used for

Transfer to another designer, printer or archive where dependencies must remain available.

3

## Professional decision

Choose this method when its content model and edge behaviour fit the brief.

4

## Quality signal

The recipient can open the package without missing links and understands usage constraints.

## Package, Preflight and Handoff · control and judgement

### CONTROL MAP

**Links status; fonts; colour mode; bleed; overprint; package report; version and naming.**

### WATCH FOR

**Assuming packaging grants font/image rights or failing to verify the collected copy.**

### QUALITY PROOF

**The recipient can open the package without missing links and understands usage constraints.**

**Decision rule · preserve a baseline, isolate the intended change, then inspect at the delivery size.**

# Copyright, Licensing and Attribution

## How it works

Copyright protects original expression; reuse depends on ownership, permission, licence terms or a valid exception.

## Best used for

Any project using third-party artwork, typefaces, photographs, icons or generated material.

## Professional decision

Choose this method when its content model and edge behaviour fit the brief.

## Quality signal

A rights register links every non-original asset to usable evidence.

## Copyright, Licensing and Attribution · control and judgement

### CONTROL MAP

**Creator/owner; source;  
licence; consent;  
modification; commercial  
use; redistribution;  
attribution.**

### WATCH FOR

**Treating online availability or  
attribution alone as  
permission.**

### QUALITY PROOF

**A rights register links every  
non-original asset to usable  
evidence.**

**Decision rule · preserve a baseline, isolate the intended change, then inspect at the delivery size.**

# Peer Review and Adaptation

1

## How it works

Structured review compares the work against agreed criteria and records what changed after feedback.

2

## Best used for

Structured evaluation, peer discussion and professional sign-off before delivery.

3

## Professional decision

Choose this method when its content model and edge behaviour fit the brief.

4

## Quality signal

The final version includes one recorded review decision and a verified improvement.

# Peer Review and Adaptation · control and judgement

## CONTROL MAP

**Purpose; audience;  
alternatives; zoom/view;  
rubric; comments; decision;  
revision log.**

## WATCH FOR

**Defensive discussion, vague  
praise or changing many  
factors without traceability.**

## QUALITY PROOF

**The final version includes  
one recorded review  
decision and a verified  
improvement.**

**Decision rule · preserve a baseline, isolate the intended change, then inspect at the delivery size.**

## Lab 09 · Image Trace, Artboards and Export

Prepare a small icon or logo asset family for web, presentation and print use.

Convert suitable raster artwork, clean the vector result and deliver a verified multi-artboard asset set.

Evidence

EVIDENCE

Clean AI master, named artboards, SVG, PNG and PDF derivatives and an export verification record.

Full procedure · Learner Guide / Lab 09

# Lab 10 · Brand System Capstone, Handoff and Peer Review

Create a launch kit containing a mark, icon family, social tile and packaging panel for a fictional sustainable retail brand.

Integrate the course workflow into a coherent vector brand kit, evaluate it and prepare a rights-aware handoff.

**EVIDENCE**

Final AI master, packaged handoff where permitted, multi-format exports, evaluation matrix, peer-review note, revision log and rights register.

Full procedure · Learner Guide / Lab 10

# Topic 3 Checkpoint

## Purpose

What must the audience notice or understand?

## Method

Why does this vector method fit the brief?

## Control

Which setting most changes the result?

## Failure

What defect would make it unacceptable?

## Proof

Which panel, view and export demonstrate quality?

## Next

What controlled variation would improve it?

# Professional Vector Workflow

## Brief

Clarify purpose, audience, channel and constraints.

## Source

Choose suitable, rights-cleared assets.

## Construct

Use economical paths and visible structure.

## Experiment

Vary one factor against a baseline.

## Evaluate

Inspect visual, technical and rights criteria.

## Deliver

Export, reopen and retain the editable master.

# Copyright and Asset Permission

## Ownership

Identify the creator or owner.

## Permission

Public visibility does not grant reuse.

## Scope

Check modification, commercial and redistribution rights.

## People

Confirm consent and privacy context.

## Attribution

Credit as the licence requires.

## Record

Retain source, licence, consent, date and use.

# Peer Review

## Describe

State purpose and key decisions.

## Show

Reveal layers, appearance and alternatives.

## Ask

Use explicit evaluation criteria.

## Record

Capture what the reviewer noticed.

## Decide

Accept, adapt or reject with a reason.

## Revise

Make one traceable improvement.

# Course Feedback

## Complete

Use the course feedback form shared by your trainer.

## Be specific

Name the explanation or resource that helped or blocked you.

## Rate fairly

Separate content, facilitation, venue and administration.

## Suggest

Describe one practical improvement.

## Support

Post-course subject consultation is available.
