

Lab 01 - Workspace, Artboards and Selection

Course: Adobe Illustrator Fundamentals for Beginners (C037) Version: v1 | 4 October 2026

Scenario

Prepare a starter document for a small icon team so another designer can navigate it confidently.

Objective

Set up a reliable vector workspace and distinguish object, group and anchor-level selection.

Supplied Illustrator/vector files

- Navigation.ai
- selection.ai
- workspace.ai

Detailed procedure

1. Open workspace.ai and save a working copy named Lab01-Workspace-Selection.ai.
2. Reset or choose a suitable workspace; display Properties, Layers and Artboards panels.
3. Name the first artboard and add a second output artboard with a different size.
4. Use Selection, Direct Selection and Group Selection on supplied artwork; record what each targets.
5. Enter and exit Isolation mode; lock one approved object and verify it cannot be changed.
6. Save the editable AI file and export a labelled PDF or PNG evidence board showing both artboards.

Evidence to retain

Lab01-Workspace-Selection.ai plus an exported evidence board and short comparison of the three selection scopes.

Acceptance criteria

- [] Two correctly named artboards are present.
- [] Only intended objects or anchors changed.
- [] Layers and groups have meaningful names.
- [] The exported evidence board shows the final state clearly.

Reflection prompts

- Which decision most improved the message or focal hierarchy?
- How does the Layers or Appearance panel prove that your technique remains editable?
- What rights or provenance evidence must accompany the finished image?
