

Lab 09 - Image Trace, Artboards and Export

Course: Adobe Illustrator Fundamentals for Beginners (C037) Version: v1 | 4 October 2026

Scenario

Prepare a small icon or logo asset family for web, presentation and print use.

Objective

Convert suitable raster artwork, clean the vector result and deliver a verified multi-artboard asset set.

Supplied Illustrator/vector files

- adScreen.ai
- artboards.ai
- assetExport.ai
- export.ai

Detailed procedure

1. Open adScreen.ai and save Lab09-Trace-Export.ai.
2. Identify a suitable raster element and compare at least two Image Trace presets or settings.
3. Expand the selected trace, remove noise and stray paths and simplify only where fidelity is preserved.
4. Create named artboards for web icon, presentation graphic and print mark.
5. Use Export for Screens or Asset Export to produce SVG, PNG and PDF derivatives with clear suffixes.
6. Reopen every derivative, verify size, transparency and colour and record the selected trace settings and path-count trade-off.

Evidence to retain

Clean AI master, named artboards, SVG, PNG and PDF derivatives and an export verification record.

Acceptance criteria

- [] The trace has acceptable fidelity and manageable path complexity.
- [] Artboards are correctly named and sized.
- [] All derivatives reopen successfully.
- [] Transparency and colour behaviour match the brief.

Reflection prompts

- Which decision most improved the message or focal hierarchy?
- How does the Layers or Appearance panel prove that your technique remains editable?
- What rights or provenance evidence must accompany the finished image?
